

To Whom It May Concern,

I am writing to express my interest in entry-level or associate-level opportunities in data-related roles such as **Data Analyst, Data Quality Analyst, Data Engineer, or ETL Developer**, as well as **internships in Machine Learning**. I am a certified Data Analytics and Visualization professional from the University of Minnesota, and I am eager to contribute to a forward-thinking, data-driven organization.

My educational background and project work have equipped me with a strong foundation in SQL, Python, Tableau, and database systems like PostgreSQL and MySQL. I have completed hands-on projects involving ETL pipeline development, dashboard creation, and data analysis—strengthening my ability to clean, transform, and interpret data for actionable insights.

In addition to roles in data analytics, ETL, data quality, reporting, and automation, I am also open to exploring **any internship or entry-level opportunities in IT** that will allow me to get a strong foot in the door and grow within the tech field. I continue to sharpen my abilities through platforms like **Analyst Builder** and **HackerRank**, and I am always exploring new tools and methods to stay current in the field.

Enclosed is my resume, which highlights my technical skills, academic background, and project experience. I would welcome the opportunity to bring my analytical mindset, adaptability, and enthusiasm to your team.

Thank you for considering my application. I am available to connect at your convenience and look forward to the opportunity to contribute to your organization.

Warm regards,

NavyaSri Pusuluri
